TITLE: Urn vacuum-packing device

----- KWIC -----

Basic Abstract Text - ABTX (1):

NOVELTY - An $\underline{\mathbf{urn}}$ vacuum-packing device is provided to prevent moisture or

oxygen contained in the air from remaining in the $\underline{\mathbf{urn}}$ by sealing up a lid of

the \underline{urn} in a vacuum state to keep \underline{ashes} generated after $\underline{cremation}$ in the \underline{urn}

and accordingly prevent ashes from being degenerated and polluted.

Basic Abstract Text - ABTX (2):

DETAILED DESCRIPTION - An $\underline{\tt urn}$ vacuum-packing device is composed of a vacuum

chamber (10) capable of being opened and closed, a vacuum pump (20) communicated

with the inside of the vacuum chamber and an exhaust pipe(51), an exhaust

valve(50) mounted to the exhaust pipe, a transfer device(30)
installing and

transferring a lid(62) of an $\underline{\mathbf{urn}}$ (60), a placing groove(11) arranging the \mathbf{urn} at

a fixed position, and an intake $\underline{\text{valve}}$ (40) flowing-in air from the atmosphere.
